

Climber Aid

Improving accessibility to better climbing

► What is Climber Aid

Advanced Climbing Metrics to
Enhance the User Experience
For Climbers, By Climbers

Programmer Zach Yarvis climbing outside

Helping make climbing advice more accessible to everyone

► Tech Stack and AI Use

Google MediaPipe	Body tracking and pose detection to look at climbers movements
Javascript/HTML	Building the website and running the webserver
Github	Hosting the code and the website
Gemini	Helping with back/front end coding, help with data analysis
IBM Bob	AI coding assistant, helped to implement new features
Claude	Additional help with coding and data analysis

► Future Improvements

Performance Enhancement

General improvements to performance, tracking, and modeling: always room for improvement.

User Friendliness

Implementing features to improve the user experience, the interface, and the overall usability of our site.

Route Tracking

Determining routes, analyzing paths, and finding optimal holds, all for a more informative user experience.

Improved Analytics

Improving the current analytics for better understanding and accuracy, adding additional analytics.

Customization

Letting the user create their own Climber Aid experience, with customizable analytics and features.

Real-Time Coaching

Enhancing our site with the ability to give advice while you climb, acting as a live coach.
